

AT BLOOM LAKE, WE **CARE**

THE **4 PILLARS** OF OUR ENVIRONMENTAL POLICY

CONTINUOUS IMPROVEMENT OF OUR ENVIRONMENTAL PERFORMANCE

Our environmental performance requires use of an effective and efficient environmental management system. Implementation of this system aims to ensure:

- Strict obedience with our compliance obligations.
- Achievement of ever higher environmental performance objectives.
- Monitoring, measuring, analyzing and continually evaluating our environmental performance.
- Adequate and proactive management of environmental risks and development of opportunities for improvement.

ADVOCACY FOR RESPECT OF OUR ENVIRONMENTAL VALUES

Our environmental performance is closely linked to the commitment of all hierarchy levels of the company. This results in:

- Leadership oriented towards the development and maintenance of a responsible environmental culture.
- Commitment and dedication of all our employees to achieve the highest environmental standards of the Canadian mining industry.

RESPECT FOR LOCAL COMMUNITIES

The environmental and socioeconomic issues of the interested parties occupy a key place in defining the success of our company.

Land use continues to be a privilege, and from this perspective we aim to develop and maintain a successful collaboration with local communities, including Aboriginal communities, in an approach based on listening, mutual understanding, trust, transparency and respect.

ENVIRONMENTAL PROTECTION

Environmental protection and pollution prevention are essential to a profitable business strategy. Therefore, we aim to minimize the impacts that our current and future activities may have on the environment, biodiversity and the social setting throughout the life cycle of our operations.
